The TruSound Compressor is in general slow acting, which offers transparent sound processing, naturalness and good sound quality.

In combination with fast and ultra-fast acting modes this ensures listening comfort and audibility in changing sound environments.

Studies have shown user preference for slow acting compressors*.

• The TruSound Compressor, TruSound Stabilizers and TruSound Softener together make up the Widex TruSound Compression System.

• The TruSound Automatic Output Control acts as a limiter, which ensures that the receiver never gets overloaded.

EXAMPLE COMPRESSION CURVE

• The light blue segment on the curve designates TruSound Compressor, TruSound Stabilizer and TruSound Softener. The dark blue segment designates Automatic Output Control, which represents the Maximum Power Output.
